HTS ribbed and profiled surfaces For impressive furniture and interior design

HTS ribbed and profiled surfaces are available as „Flex“ version on the one hand and on a backing board on the other.

The Flex versions are suitable for curved surfaces with inner and outer radii. The possible bending radius depends on the respective surface structure. Furniture parts, counter fronts, column claddings, etc. can thus be designed quickly and easily.

For wall panelling or furniture fronts, HTS ribbed and profiled surfaces on MDF core board are available. The veneer on the back is the same as on the front.

The structure direction is possible both lengthwise and crosswise.

Panel length:

- longitudinal structure 2500 mm
- crosswise structure 2450 mm

The surfaces are sanded and untreated.

FSC® certified panels on request.
